1. The Jisr Story & Elevator Pitch

Why Jisr Exists

Saudi businesses have long been underserved by generic HR software built for foreign markets. Jisr was born and built in Saudi Arabia — not adapted, not localized after the fact, but designed from day one for KSA labor law, WPS, GOSI, and Muqem compliance.

The 30-Second Elevator Pitch

Use This Verbatim

"Most HR software makes Saudi companies work around the system — chasing compliance updates, handling payroll errors, and waiting days for support from overseas call centers.

Jisr is the only HR platform built inside Saudi Arabia from scratch. We sync with WPS, GOSI, and Muqem in real time, give you a local team on the ground in Riyadh, Dammam, and Jeddah, and get you live in under a month.

That's why 168+ Saudi businesses — from 50-person retail chains to 5,000-employee manufacturers — chose Jisr."

Proof Points — Anchor Every Conversation Here

- 168+ Saudi businesses live on Jisr
- 85,000+ employees managed on the platform
- Cosmoplast: 90% reduction in payroll processing time (5,000+ employees)
- Femco: Day 1 productivity for new hires via digital onboarding (500 employees)
- Average go-live: under 30 days
- SAP, Oracle & ERP integrations — deep, not decorative
- First platform approved for Qiwa integration

2. Ideal Customer Profile (ICP)

Primary ICP — Highest Win Rate

Dimension	Primary ICP	Secondary ICP
Company Size	200 – 2,000 employees (Tier 1–3)	50–200 employees (Tier 4–6)
Industry	Manufacturing, Construction, Retail, Food & Beverage, Facilities	Professional Services, Healthcare, Education
Workforce Type	Labor-heavy, shift-based, multi-site	Office + mixed workforce
Geography	Riyadh, Dammam, Jeddah (KSA)	Other KSA cities
Current State	On a competitor or manual/ERP workaround	Greenfield or basic payroll only
Pain Signal	Compliance fines, payroll errors, slow support	Rapid growth, new WPS requirements

Disqualify Early — Do Not Waste Cycles On:

- Companies outside Saudi Arabia (Jisr is KSA-native)
- Under 30 employees — unit economics rarely work
- Companies mid-implementation of a competing system unless there are active pain signals
- Free / zero-budget explorers with no decision timeline

3. Buyer Personas

Persona 1: HR Manager / HR Director

Titles: HR Manager, HR Director, Head of People

Company size: 100–2,000 employees

GOALS:

- Zero compliance violations (WPS, GOSI, Muqem)
- Reduce manual HR workload — want to do strategic work
- Get visibility into attendance, overtime, and headcount in real time

PAINS:

- Chasing government platform updates manually
- Payroll errors that create employee trust issues
- Poor or overseas after-sales support from current vendor

MESSAGING ANGLE:

"Jisr handles the compliance so you can focus on your people — not the paperwork."

Persona 2: Finance Director / CFO

Titles: Finance Director, CFO, Finance Manager

Company size: 200–5,000 employees

GOALS:

- Accurate payroll with zero manual reconciliation
- Visibility into labor cost vs. overtime vs. budget
- Seamless ERP/SAP integration

PAINS:

- Payroll errors requiring manual corrections each cycle
- Integration failures between HR system and accounting
- Compliance fines due to WPS/GOSI delays

MESSAGING ANGLE:

"Jisr's SAP and ERP integration is real — not promised. Your finance team stops reconciling and starts analyzing."

Persona 3: Operations / General Manager

Titles: Operations Manager, GM, COO

Company size: 50–2,000 employees

GOALS:

- Control labor costs across multiple sites
- Streamlined shift scheduling and overtime management
- Fast onboarding for seasonal or high-turnover workforce

PAINS:

- No real-time visibility into attendance across sites
- Overtime leakage eating into margins
- New hires not productive on Day 1

MESSAGING ANGLE:

"Jisr gives operations managers real-time control over their biggest cost: labor."

4. Discovery Questions

Opening — Set the Stage

- "Before I show you anything, can you walk me through how payroll and HR work today? Who touches it, how many systems are involved?"
- "What made you take this meeting — what's the thing that finally pushed you to look at alternatives?"
- "How long have you been with [current system]? What's the history there?"

Compliance

- "How do you currently handle WPS submission — is that automated or does someone do it manually?"
- "Have you received any fines or warnings from GOSI or Muqem in the past 12 months?"
- "When the government updates a regulation, how quickly does your current system reflect that?"

Payroll Accuracy & Time/Attendance

- "How many payroll errors would you say you correct each month — ballpark?"
- "Is your time and attendance data feeding directly into payroll or does someone reconcile it?"
- "Do you have employees on shifts? How do you currently manage scheduling and overtime approval?"

After-Sales & Support

- "When something goes wrong today — a payroll issue, a system error — how long does it take to get resolved?"
- "Is your support team local or overseas? Do you have a named contact or a generic ticket queue?"
- "On a scale of 1–10, how would you rate the support quality you get today?"

Integrations

- "What ERP or accounting systems do you use? Has integrating your current HR tool been smooth?"
- "Are you on SAP or Oracle? Have you tried integrating those with your current HR system?"

Decision Process

- "Who else needs to be involved in this decision — finance, IT, the CEO?"
- "What does your evaluation timeline look like? Is there a renewal date with your current vendor?"
- "What would make this a clear yes for you — what does success look like in 6 months?"

5. Competitor Battle Cards

vs. ZenHR — Most Common Displacement

Dimension	Jisr Advantage vs. ZenHR
After-Sales Support	"ZenHR customers called a non-Saudi number and waited. Jisr has on-ground teams in Riyadh, Dammam, and Jeddah — same-day response." (Source: 7 ZenHR displacements)
Saudi-Born vs. Saudi-Branded	"ZenHR claims Saudi roots — Jisr was born here. That native understanding is the difference between a system that works and one that tries to."
Reports & Customization	"ZenHR reports are complicated and not customizable enough. Jisr gives you reports that management actually use."
End-of-Service Automation	"ZenHR's end-of-service calculation is still manual. Jisr automates it fully — no human error, no compliance risk."
Permissions Flexibility	"Several ZenHR customers ran into walls customizing user permissions. Jisr's permission model is flexible and designed for complex org structures."
T&A → Payroll Accuracy	"Clients switching from ZenHR often tell us their T&A data wasn't reliably feeding payroll. That causes correction cycles every month. Jisr eliminates that."

vs. Bayzat — Localization Gap

Dimension	Jisr Advantage vs. Bayzat
KSA Labor Law Expertise	"Bayzat doesn't have offices in Saudi Arabia and is not fully focused on the Saudi market. They miss Saudi-specific regulatory updates. Jisr updates within 24 hours of any government change."
Automation & Notifications	"Bayzat's automation and reminders had known issues — critical notifications not being received. Jisr's automation is deep and reliable."
UI / Ease of Use	"Multiple Bayzat customers told us the interface was confusing. Jisr's UI is designed for Saudi HR teams — simple, fast, intuitive."
Government Integration Depth	"Bayzat lacks full integration with all government platforms. Jisr integrates natively with WPS, GOSI, Muqem, and Qiwa (first platform approved)."
Continuous Innovation	"Bayzat's Saudi market focus limits their ability to keep pace with Vision 2030 requirements. Jisr invests continuously in Saudi-specific features."

vs. Menaitech — Reporting & Support

Dimension	Jisr Advantage vs. Menaitech
Report Quality	"Menaitech reports frequently don't meet management expectations. Jisr's reports are accurate, customizable, and ready for the boardroom."
SAP Integration	"Menaitech overpromised on SAP integration and underdelivered. Jisr's SAP integration is deep and documented — ask to see a live demo."
After-Sales Service	"Menaitech has delays and quality gaps in after-sales. Jisr's CS team has local branches and named contacts for every account."
Ease of Use	"Menaitech is highly complex and hard to navigate daily. Jisr is built for HR managers who need to move fast, not IT specialists."

vs. Odoo — Built for HR, Not Customization

Dimension	Jisr Advantage vs. Odoo
Implementation Speed	"Odoo customization takes months and costs extra. Jisr goes live in under 30 days — no third-party required."
Total Cost of Ownership	"Odoo's add-ons and customization fees add up fast. Jisr is all-in — compliance, payroll, T&A, onboarding — in one price."
Interface	"Odoo is notorious for a complex interface. Jisr was designed for HR users, not developers."
Cloud vs. Local Server	"Odoo often runs on local servers — maintenance nightmare. Jisr is fully cloud, accessible from anywhere, always up."

vs. Palm HR — Quality Over Price

Dimension	Jisr Advantage vs. Palm HR
Price Objection Response	"Palm is cheaper — but Jisr works for you, not the other way around. Every client who switched from Palm tells us they stopped fighting the system. The cost of payroll errors and compliance fines is far higher than the price difference."
GOSI Integration	"Palm HR has known GOSI integration issues. Jisr's government integrations are real-time and fully certified."
Shift Scheduling	"Palm HR's shift scheduling is limited. Jisr handles complex multi-site shift management natively."
End-of-Service Calculation	"End-of-service automation is weak in Palm. Jisr handles it automatically and accurately."

vs. Microsoft Dynamics / SAP / ERP

Dimension	Jisr Advantage vs. ERP HR Modules
Responsiveness	"ERP HR modules have long implementation queues and slow support cycles. Jisr is purpose-built for speed — live in under a month, support same-day."
Saudi Compliance	"Generic ERP systems aren't updated in real time for KSA regulations. Jisr is — that's its entire reason for existing."
Cost	"ERP HR is expensive to configure and maintain. Jisr is the most cost-effective compliant HR solution in KSA."
Hybrid Use Case	"Many clients run Jisr alongside SAP — Jisr handles HR/payroll/compliance, SAP handles finance. The integration is seamless."

6. Objection Handling

Objection	What They Really Mean	Jisr Response
"Your price is too high / [X] is cheaper"	They haven't seen the full cost of NOT switching yet	Acknowledge: "You're right that Palm / ZenHR is cheaper on paper." Pivot: "But our clients tell us the real cost was in payroll errors, compliance fines, and the hours spent on support calls that never got resolved. Cosmoplast cut payroll time by 90%." Close: "Can I show you a quick ROI calculation for a company your size?"
"We're happy with our current system"	They're not feeling enough pain — yet	Probe: "That's great — what's working well? And what's the one thing you'd change if you could?" Plant a seed: "Most of our clients said the same thing six months before they switched. The issues were there — but they only became visible when a compliance audit or payroll error made them undeniable." Ask: "How's your support response time today?"
"We just renewed with [competitor]"	Timing issue — not closed forever	Validate: "That makes sense — no one wants to switch mid-contract." Set a stake: "Let's stay in touch. When does the contract expire? I'd love to get on your radar 6 months before renewal." Offer value now: "In the meantime, can I share our compliance update tracker — it's free and helps you stay on top of WPS/GOSI changes regardless of which system you use?"
"Can you integrate with our ERP/SAP?"	Technical concern — or a test	Confidently: "Yes. Jisr has deep SAP and Oracle integrations — not surface-level. Let me pull up a client using the same setup as you." Reference: "Cosmoplast (5,000 employees) runs Jisr alongside SAP. I can arrange a reference call if that would help." Never overpromise — if their setup is unusual, involve your pre-sales engineer.

Objection	What They Really Mean	Jisr Response
"We need to check with IT / the CEO / Finance"	Multi-stakeholder deal — they need ammo	Equip your champion: "Absolutely — let me give you a one-pager that addresses exactly the questions your [IT/CFO] will ask." Propose a joint meeting: "Would it make sense to include them in our next call? 20 minutes — I can make the business case directly." Create urgency: "When is your next review cycle? I want to make sure you have everything before that."
"Implementation looks too complex"	Fear of disruption	Reassure: "The #1 thing our clients say after going live is that it was faster and easier than they expected." Proof: "National Center for Palm and Dates went live in under a month. Femco had new hires productive on Day 1." Offer: "We handle the entire setup — your team doesn't need to do heavy lifting. We migrate your data, configure the system, and train your team."

7. Demo Talk Track

Before the Demo — The 3 Things You Must Know

- What is their #1 pain? (Compliance? Payroll errors? Support? Integrations?)
- What system are they on or evaluating against?
- Who is in the room and what is their role?

Demo Flow (45 Minutes)

Time	Stage	Talk Track / Actions
0–5 min	Opening & Agenda Set	"Before I dive in — I want to make sure I show you what matters most to you. You mentioned [pain from discovery]. I'll make sure we focus there." "Today: (1) Quick overview of what Jisr does, (2) Three features most relevant to you, (3) How a company like yours went live in [X weeks]. Any additions?"
5–12 min	Compliance Demo	Show real-time WPS sync: "No manual uploads, no waiting for batch files. It's live." Show GOSI + Muqem integration: "When a regulation changes, Jisr updates within 24 hours — you don't need to do anything." Ask: "Is this what you were hoping to see, or is there a specific compliance scenario you want me to walk through?"
12–25 min	Pain-Specific Module	[If support was pain]: Show the customer success portal, SLA metrics, local team access. [If payroll errors]: Walk through T&A → payroll automation. Show the reconciliation view. [If reporting]: Build a live custom report. Show management-ready exports. [If integration]: Show SAP/ERP live connection or share the Cosmoplast integration case.
25–35 min	Proof & Social Proof	"Let me show you how Cosmoplast (5,000 employees, similar industry) uses this exact workflow." Share relevant metrics: 90% time savings, Day 1 onboarding, go-live timeline. "I'd be happy to arrange a reference call with a similar Saudi company if that would help."
35–45 min	Close & Next Steps	"Based on what I've shown you — does this address what you were looking for?"

Time	Stage	Talk Track / Actions
		"What would you need to see to move forward? Technical deep-dive? Reference call? Pricing?" Propose a concrete next step with a date. "If we started today, you could be live in [X weeks] — before your next payroll cycle."

Demo Power Moves

- Use their company name in the demo if possible — not a fake demo account
- Quote the discovery call back: "You mentioned last week that support response time was a frustration..."
- Always show one metric: 90% time savings / 30-day go-live / 168+ clients
- End every demo module with a check-in question — don't monologue for 30 minutes

8. Customer Onboarding Playbook

Use this to set expectations with new customers and ensure they reach their "aha moment" fast. Rapid time-to-value = lower churn risk.

Activation Goals (The "Aha Moment")

- First payroll run completed successfully ← primary activation event
- Time & Attendance data flowing automatically into payroll
- At least one compliance integration live (WPS or GOSI)
- HR team can self-serve basic tasks without calling support

Onboarding Timeline

Week	Milestones	Who Owns It
Week 1	Kickoff call — map current system, import org structure Data migration plan agreed Admin users set up and trained	CSAM + Client HR Lead
Week 2	Employee data migrated T&A devices/integrations connected Payroll structure configured	CSAM + Client Payroll Lead
Week 3	First payroll parallel run (new + old system side by side) Compliance integrations (WPS/GOSI) activated and tested Shift schedules configured	CSAM
Week 4	Go-live — first live payroll run Employee self-service portal activated Handoff to ongoing CS relationship	CSAM → CS

At-Risk Signals — Act Immediately

- Customer hasn't logged in 5+ days after kickoff
- Data migration delayed by more than 1 week
- Payroll parallel run reveals >5% discrepancy
- Customer mentions going back to old system "just this month"
- Support tickets unresolved for more than 48 hours

Recovery Playbook for Stalled Onboarding

- Day 5 no login: Personal WhatsApp from CSAM — not an automated email
- Week 2 data delay: Offer to handle migration yourself with their IT access
- Payroll discrepancy: Escalate to Team Lead, schedule same-day resolution call
- Competitor nostalgia: Schedule a "value check" call — revisit why they switched

9. Email & Follow-Up Templates

Template 1: Post-Demo Follow-Up

Send Within 2 Hours of Demo

Subject: Jisr Demo Recap — [Company Name]

Hi [Name],

Thank you for the time today. Based on our conversation, the three areas where Jisr delivers the most impact for [Company Name] are:

1. [Pain Point 1 — e.g., Real-time WPS/GOSI compliance — zero manual updates]
2. [Pain Point 2 — e.g., SAP integration that actually works]
3. [Pain Point 3 — e.g., On-ground support team in [their city]]

Attached is a one-pager with proof points from a similar company in [their industry].

Our proposed next step: [specific action — e.g., a 30-minute technical call with your IT team, or a reference call with Cosmoplast's HR Director].

Are you available [Day] at [Time] or [Day] at [Time]?

Best,

[Your Name] | Jisr | [Phone]

Template 2: Competitive Displacement

For Prospects Currently on ZenHR / Bayzat / Menaitech

Subject: Heard [Competitor] support has been a challenge — here's what Jisr clients say

Hi [Name],

I know you're currently using [Competitor]. A number of our clients came from the same system and switched for very specific reasons — [top 2 pain points for that competitor].

One example: [Company Name], similar in size to yours, made the switch in [month] and was live in [X weeks]. Their HR Manager told us: "[brief paraphrase of outcome, not a direct quote from doc]."

I'm not asking you to rip and replace anything today. But if any of those pain points resonate, it's worth a 20-minute conversation.

Worth a call this week?

[Your Name] | Jisr

Template 3: Breakup / Final Check-In

Use After 2 Unanswered Follow-Ups

Subject: Closing the loop — [Company Name]

Hi [Name],

I've reached out a couple of times and haven't heard back — totally understand, things get busy.

I'll take this as not the right time. If priorities shift or you hit a compliance issue, payroll error, or support problem with your current system, you know where to find us.

[One-liner about Jisr: e.g., "168+ Saudi companies trust Jisr — we'll be here when you're ready."]

Wishing you well,
[Your Name] | Jisr

10. Qualification Checklist

Use this before investing more than 2 hours in any deal. If you can't check 4 of 6 boxes, re-qualify or deprioritize.

Qualification Gate	Green Signal
Pain is Real	They named a specific pain — compliance, payroll errors, support, integration — not just "exploring options"
Decision Maker Access	You have spoken to or have a path to the HR Director, Finance Director, or GM — not just a coordinator
Budget Exists or Can Be Created	They have a budget for HR software, or a compelling event (audit, fine, renewal) that creates urgency
Timeline is Defined	They have a go-live date in mind or a contract expiry within 6 months
ICP Match	Company is 50+ employees, KSA-based, labor-heavy or compliance-sensitive sector
No Fatal Blocker	No mid-implementation freeze, no executive freeze on all software spend, no exclusive multi-year lock-in

Competitive Intel to Gather Every Deal

- Which system are they on? (Set the right battle card)
- How long have they been on it? (Shorter = easier to displace)
- What triggered this evaluation? (Pain signal = urgency)
- What is the contract end date? (Timing)
- Who is the internal champion? (Your ally inside)
- What does "success" look like for them in 6 months? (Anchor your value)
